

Subject : No show of camera name and time in the Java Applet**No: FWT_GS020_Rev0****No show of camera name and time in the Java Applet page**

You should use `FWB.class` instead of `FWatch.class` which is used in the "Live view → 1.Java Applet → *single view". `FWatch.class` and `FWB.class` are functionally same, but `FWatch.class` has border for camera name and time display although `FWB.class` doesn't have. At "Sample" page in FlexWATCH itself, you can see this difference. For example, just change `FWatch.class` to `FWB.class` in `/flexwatch/app/applet/as.html`. Then you can get your goal.
